MAIL DATE

DELIVERY MODE

01/25/2008

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/719,812

Applicant(s)

TOMKOW, TERRENCE A.

Examiner

Matthew T. Henning

Art Unit

2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 November 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-24, 26-28, 30-40 and 43-47 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-24, 26-28, 30-40 and 43-47 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 May 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

Art Unit: 2131

1 This action is in response to the communication filed on 11/05/2007.

2 **DETAILED ACTION**

3 *Response to Arguments*

4 Regarding applicant's arguments with respect to claim 24, contrary to applicant's
5 allegation that claim 24 has been amended to recite "sending an attachment separate from a
6 message", the examiner notes that no amendment adding this limitation to the claim has been
7 made, and as such the argument has not been further addressed. The examiner further notes
8 that there is no recitation in claim 24 regarding an attachment or decompression of an
9 attachment. As such the examiner does not find the argument persuasive.

10 Regarding applicant's arguments with respect to claim 46, that Tomkow does not
11 disclose "[A]separating the hash from a string including the hash, [B]hashing information
12 relating to the identification of the sender, the attachment and the message stripped of the
13 attachment, [C]and then comparing the hash separated from the string and the hash formed from
14 the information of the sting", the examiner does not find the arguments persuasive. Tomkow
15 discloses [A] on page 41 Lines 32-33. The document digital signature is the hash in encrypted
16 form, which is then decrypted after separating it from the rest of the e-mail (string). Tomkow
17 discloses [B] on Page 42 Lines 1-2. There is nothing in the claim language that limits the
18 meaning of an "attachment" to anything other than its ordinary meaning, and as such applicant's
19 argument is not persuasive. Tomkow' discloses [C] on page 42 Lines 2-5. As such, the
20 examiner does not find the argument persuasive.

21 Applicant's arguments with respect to the remaining claims have been considered but are
22 moot in view of the new ground(s) of rejection.

Art Unit: 2131

1 Claims 1-24,26-28,30-40 and 43-47 have been examined.

2 *Claim Objections*

3 Claims 13-14, 19, 21, and 23 are objected to because of the following informalities:

4 Claims 13, 19, 21, and 23 are all improperly labeled as "Original" while containing
5 markings indicating changes to the claims.

6 Claim 14 lacks a terminating period and further was amended to recite "attachment1"
7 which lacks antecedent basis in the claim.

8 Appropriate correction is required.

9
10 *Claim Rejections - 35 USC § 102*

11 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the
12 basis for the rejections under this section made in this Office action:

13 *A person shall be entitled to a patent unless –*

14 *(b) the invention was patented or described in a printed publication in this or a foreign*
15 *country or in public use or on sale in this country, more than one year prior to the date of*
16 *application for patent in the United States.*

17
18 Claims 24 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Tomkow
19 (WO 01/10090).

20 Regarding claim 24 , Tomkow disclosed in a method of transmitting a message from a
21 sender to a recipient through a server displaced from the recipient (See Tomkow Abstract), the
22 steps at the server of: receiving the message from the recipient at a web site providing at the
23 server for an indication of the authenticity of the message (See Tomkow Page 41 Lines 28-32);
24 providing a compressed encrypted version of the message where the compression is a particular

Art Unit: 2131

1 compression and the encryption is a particular encryption (See Tomkow Page 41 Lines 30-32);
2 decompressing the message in accordance with the particular compression to provide a first
3 digital fingerprint of the message (See Tomkow Page 42 Lines 1-2); decrypting the compressed
4 encrypted version of the message in accordance with the particular encryption to provide a
5 second digital fingerprint of the message (See Tomkow Page 41 Lines 30-32); and comparing the
6 first and second digital fingerprints of the message to determine the authenticity of the message
7 (See Tomkow Page 42 Lines 2-15).

8 Regarding claims 26 Tomkow disclosed that the message is received at the server
9 through the internet and wherein the message and the digital signature of the message are
10 transmitted to the recipient through the internet, and that the state of authenticity of the message
11 is transmitted through the internet to the recipient (See Tomkow Page 43 Lines 3-28).

12
13 ***Claim Rejections - 35 USC § 103***

14 The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all
15 obviousness rejections set forth in this Office action:

16 *A patent may not be obtained though the invention is not identically disclosed or*
17 *described as set forth in section 102 of this title, if the differences between the subject matter*
18 *sought to be patented and the prior art are such that the subject matter as a whole would have*
19 *been obvious at the time the invention was made to a person having ordinary skill in the art to*
20 *which said subject matter pertains. Patentability shall not be negated by the manner in which*
21 *the invention was made.*
22

23 Claims 1-23, 27-28, 30-32, and 40 are rejected under 35 U.S.C. 103(a) as being
24 unpatentable over Tomkow, and further in view of Meyer et al. (Patent Application Publication
25 US 2002/0143871) hereinafter referred to as Meyer.

1 Regarding claims 1, 8, and 14, Tomkow disclosed a method of transmitting a message
2 from a sender to a recipient through a server displaced from the recipient (See Tomkow
3 Abstract), including the steps at the server of: receiving the message at the server from the sender
4 (See Tomkow Page 29 Lines 16-18), transmitting from the server to the recipient the message
5 and an attachment including the identity and address of the recipient and the identity of the
6 sender and the time of the transmittal (See Tomkow Page 30 Line 14 – Page 31 Line 26),
7 receiving the message and the attachment at the server from the recipient (See Tomkow Page 30
8 Line 14 – Page 31 Line 26), providing digital signatures of the message and the attachment at the
9 server (See Tomkow Page 29 Lines 19 – Page 30 Line 11), and authenticating to the recipient the
10 message and the attachment at the server on the basis of the information received by the recipient
11 from the server and on the basis of the digital signatures provided by the server (See Tomkow
12 Page 41 Line 28 – Page 42 Line 15), but Tomkow failed to disclose that the attachment was an
13 HTML file or generating the HTML file at the server.

14 Meyer teaches that in at email server, meta-content can be added in the form of an html
15 attachment to a email by (1) separating the email body from the header, (2) extracting the email
16 send date, (3) extracting various named entities, (4) executing a summarization process to
17 produce a document summary, (5) normalization of dates and currency, (6) color-encoding dates,
18 (7) sorting and displaying dates, (8) annotation by color-coding, (9) creating hyperlinks to
19 external HTML documents, and (10) converting special characters to HTML ampersand
20 characters (See Meyer Fig. 1 and Fig. 7a and Paragraph 0091-0095).

21 It would have been obvious to the ordinary person skilled in the art at the time of
22 invention to employ the teachings of Meyer in the E-mail system of Tomkow, by providing an

Art Unit: 2131

1 HTML index attachment, to each email of Tomkow, the index attachment containing meta-
2 content. This would have been obvious because the ordinary person skilled in the art would have
3 been motivated to simplify the use and management of the e-mails for recipients. It further
4 would have been obvious in this combination that the meta-content index would have been
5 digitally signed and verified by the system, because Tomkow disclosed that the message and all
6 attachments would be signed and verified (See Tomkow Page 40 Lines 19-31).

7 Regarding claim 27, Tomkow disclosed in a method of transmitting a message from a
8 sender to a recipient through a server displaced from the recipient (See Tomkow Abstract), the
9 steps at the server of: receiving the message from the recipient at a web site providing at the
10 server for an indication of the authenticity of the message (See Tomkow Page 41 Lines 28-32);
11 providing a compressed encrypted version of the message where the compression is a particular
12 compression and the encryption is a particular encryption (See Tomkow Page 41 Lines 30-32);
13 receiving an attachment from the recipient at the website where the reception of the attachment is
14 at the same time as the reception of the message and the attachment contains information about
15 delivery of the message to the recipient (See Tomkow Page 41 Line 28 – Page 42 Line 15)
16 decompressing the message in accordance with the particular compression to provide a first
17 digital fingerprint of the message (See Tomkow Page 42 Lines 1-2); decrypting the compressed
18 encrypted version of the message in accordance with the particular encryption to provide a
19 second digital fingerprint of the message (See Tomkow Page 41 Lines 30-32); and comparing the
20 first and second digital fingerprints of the message to determine the authenticity of the message
21 (See Tomkow Page 42 Lines 2-15), Tomkow failed to disclose that the attachment was separate
22 from the message.

1 Meyer teaches that in at email server, meta-content can be added in the form of an html
2 attachment to a email by (1) separating the email body from the header, (2) extracting the email
3 send date, (3) extracting various named entities, (4) executing a summarization process to
4 produce a document summary, (5) normalization of dates and currency, (6) color-encoding dates,
5 (7) sorting and displaying dates, (8) annotation by color-coding, (9) creating hyperlinks to
6 external HTML documents, and (10) converting special characters to HTML ampersand
7 characters (See Meyer Fig. 1 and Fig. 7a and Paragraph 0091-0095).

8 It would have been obvious to the ordinary person skilled in the art at the time of
9 invention to employ the teachings of Meyer in the E-mail system of Tomkow, by providing an
10 HTML index attachment, to each email of Tomkow, the index attachment containing meta-
11 content. This would have been obvious because the ordinary person skilled in the art would have
12 been motivated to simplify the use and management of the e-mails for recipients. It further
13 would have been obvious in this combination that the meta-content index would have been
14 digitally signed and verified by the system, because Tomkow disclosed that the message and all
15 attachments would be signed and verified (See Tomkow Page 40 Lines 19-31).

16 Regarding claim 40, Tomkow disclosed in a method of transmitting a message and an
17 attachment from a sender through a server displaced from the recipient, the steps at the server of:
18 identifying the sender (See Tomkow Page 16 Line 10 – Page 17 Line 5), providing the
19 attachment and the message stripped of the attachment (See Tomkow Page 29 Lines 21-31),
20 providing a string formed from the identification of the sender, the attachment and the message
21 stripped of the attachment (See Tomkow Page 40 Lines 19-31), and hashing the string (See
22 Tomkow Page 40 Lines 19-31), encrypting the hash of the hashed string (Tomkow Page 40 Lines

Art Unit: 2131

1 19-31); digitally sealing the encrypted hash of the hashed string by attaching the encrypted hash
2 of the hashed string to [the email] (See Tomkow Page 40 Lines 19-31); and sending to the
3 recipient the message and the encrypted hash of the hash string (Tomkow Page 40 Lines 19-31),
4 but Tomkow failed to disclose attaching the hash to an HTML file or sending the HTML file
5 including the hash.

6 Meyer teaches that in at email server, meta-content can be added in the form of an html
7 attachment to a email by (1) separating the email body from the header, (2) extracting the email
8 send date, (3) extracting various named entities, (4) executing a summarization process to
9 produce a document summary, (5) normalization of dates and currency, (6) color-encoding dates,
10 (7) sorting and displaying dates, (8) annotation by color-coding, (9) creating hyperlinks to
11 external HTML documents, and (10) converting special characters to HTML ampersand
12 characters (See Meyer Fig. 1 and Fig. 7a and Paragraph 0091-0095).

13 It would have been obvious to the ordinary person skilled in the art at the time of
14 invention to employ the teachings of Meyer in the E-mail system of Tomkow, by providing an
15 HTML index attachment, to each email of Tomkow, the index attachment containing meta-
16 content. This would have been obvious because the ordinary person skilled in the art would have
17 been motivated to simplify the use and management of the e-mails for recipients. It further
18 would have been obvious in this combination that the meta-content index would have been
19 digitally signed and verified by the system, because Tomkow disclosed that the message and all
20 attachments would be signed and verified (See Tomkow Page 40 Lines 19-31).

21 Regarding claim 2, Tomkow and Meyer disclosed that the server creates digital
22 fingerprints from the digital signatures and from the message and the attachment to authenticate

1 the message and the attachment on the basis of the digital fingerprints (See Tomkow Page 12
2 Lines 1-6 and Page 29 Lines 21-26 and Page 40 Lines 19-31).

3 Regarding claim 3, Tomkow and Meyer disclosed that the attachment includes interim
4 stations between the recipient and the server (See Tomkow Page 2 Lines 1-3) and wherein the
5 message and the attachment, and the digital signatures of the message and the attachment, are
6 transmitted from the server to the sender to provide for a determination at the server for the
7 sender of the authenticity of the message and the attachment (See Tomkow Page 22 Line 14 –
8 Page 23 Line 30).

9 Regarding claim 4, Tomkow and Meyer disclosed that the message and the attachment
10 and the digital signatures of the message and the attachment are not retained at the sender when
11 the message and the attachment and the digital signatures are transmitted from the server to the
12 sender (See Tomkow Page 25 Lines 15-21).

13 Regarding claim 5, Tomkow and Meyer disclosed that the message and the attachment
14 and the digital signatures of the message and the attachment are transmitted from the server to
15 the sender (See Tomkow Page 22 Line 15 – Page 23 Line 30).

16 Regarding claim 6, Tomkow and Meyer disclosed that the sender transmits to the server,
17 to authenticate the message, the information supplied by the server to the sender and wherein the
18 server operates upon the information from the sender to authenticate the message (See Tomkow
19 Page 26 Line 1 – Page 28 Line 4).

20 Regarding claim 7, Tomkow and Meyer disclosed that the message and the digital
21 signature of the message are discarded after the message and the digital signature are transmitted
22 by the server to the sender (See Tomkow Page 25 Lines 4-16).

1 Regarding claim 9, Tomkow and Meyer disclosed transmitting to the recipient the state of
2 authenticity of the message on the basis of the results of the comparison of the digital
3 fingerprints (See Tomkow Page 41 Line 28 – Page 42 Line 15).

4 Regarding claim 10, Tomkow and Meyer disclosed transmitting to the server the message
5 and the attachment, and receiving from the sender the message and the attachment and the digital
6 signatures of the message and the attachment, producing digital fingerprints of the message, the
7 attachment and the digital signatures, and comparing the digital fingerprints relating to the
8 message, and the digital fingerprints relating to the attachment, to determine the authenticity of
9 the message and the attachment (See Tomkow Page 26 Line 1 – Page 28 Line 4).

10 Regarding claim 11, Tomkow and Meyer disclosed disposing of the message and the
11 attachment and the digital signatures of the message and the attachment after transmitting this
12 information to the sender (See Tomkow Page 25 Lines 4-16).

13 Regarding claim 12, Tomkow and Meyer disclosed at the server: providing at the server,
14 at the same time as the reception of the message, an attachment including the identity of the
15 sender and the identity and address of the server and the identity and address of the recipient and
16 the time of transmission of the message from the server to the recipient (See Tomkow Page 30
17 Line 14 – Page 31 Line 26), transmitting from the server to the recipient the attachment at the
18 same time as the transmission of the message (See Tomkow Page 30 Line 14 – Page 31 Line 26),
19 and receiving from the recipient at the server the message and the attachment (See Tomkow Page
20 30 Line 14 – Page 31 Line 26), providing digital fingerprints of the message, the attachment and
21 the digital signatures of the message and the attachment (See Tomkow Page 41 Line 28 – Page
22 42 Line 15), providing an indication of the authentication of the attachment on the basis of a

1 comparison at the server of the digital fingerprints relating to the message and the digital
2 fingerprints relating to the attachment (See Tomkow Page 41 Line 28 – Page 42 Line 15).

3 Regarding claim 13, Tomkow and Meyer disclosed transmitting from the server to the
4 recipient an indication of the authenticity of the message on the basis of the comparison of the
5 digital fingerprints relating to the message and the digital fingerprints relating to the attachment
6 (See Tomkow Page 41 Line 28 – Page 42 Line 15).

7 Regarding claim 15, Tomkow and Meyer disclosed that digital fingerprints are provided
8 at the server of the message and the attachment and digital fingerprints are provided at the server
9 of the digital signatures of the message and the attachment (See Tomkow Page 41 Line 28 –
10 Page 42 Line 15) and wherein a comparison is provided at the server of the digital fingerprints of
11 the message and the digital signature of the message, and the attachment and the digital signature
12 of the attachment, to determine the authenticity of the message and the attachment (See Tomkow
13 Page 41 Line 28 – Page 42 Line 15).

14 Regarding claim 16, Tomkow and Meyer disclosed that the indications of the state of
15 authenticity of the message and the attachment are transmitted from the server to the recipient
16 (See Tomkow Page 41 Line 28 – Page 42 Line 15) and wherein the message and the attachment
17 and the digital signatures of the message and the attachment are discarded at the server when the
18 indications of the authenticity of the message and the attachment are transmitted from the server
19 to the recipient (See Tomkow Page 35 Lines 11-13).

20 Regarding claim 17, Tomkow and Meyer disclosed that the message and the attachment
21 and the digital signatures of the message and the attachment are transmitted from the server to
22 the sender and wherein the server produces digital fingerprints of the message and the attachment

Art Unit: 2131

1 and digital fingerprints of the digital signature of the message and the attachment and wherein
2 the server compares the digital fingerprints relating to the message, and the digital fingerprints
3 relating to the attachment, to determine the authenticity of the message and the attachment (See
4 Tomkow Page 22 Line 14 – Page 23 Line 30 and Page 26 Line 1 – Page 28 Line 4).

5 Regarding claim 18, Tomkow and Meyer disclosed that the server transmits to the
6 recipient the results of the comparison and wherein the server discards the message and the
7 attachment and the digital signatures of the message and the attachment when the server
8 transmits the message and the attachment and the digital signature of the message and the
9 attachment to the recipient (See Tomkow Page 25 Line 3 – Page 28 Line 4).

10 Regarding claim 28, Tomkow and Meyer disclosed transmitting to the recipient the
11 results of the comparison of the first and second digital fingerprints of the message and the first
12 and second digital fingerprints of the attachment (See Tomkow Page 41 Line 28 – Page 42 Line
13 15).

14 Regarding claims 19-23, 30, 31 Tomkow and Meyer disclosed that the message is
15 received at the server through the internet and wherein the message and the digital signature of
16 the message are transmitted to the recipient through the internet, and that the state of authenticity
17 of the message is transmitted through the internet to the recipient (See Tomkow Page 43 Lines 3-
18 28).

19 Regarding claim 32, Tomkow and Meyer disclosed the attachment includes the identity
20 of the sender and the identity and the address of the server and the identity and address of the
21 recipient and the time of transmission of the message from the server to the recipient (See
22 Tomkow Page 30 Line 14 – Page 31 Line 26).

1 Claims 43-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomkow
2 and Meyer, and further in view of Stark et al (Patent Application Publication 2002/0131566)
3 hereinafter referred to as Stark.

4 Regarding claim 43, Tomkow disclosed in a method of authenticating at a recipient a
5 message and an attachment transmitted from a sender to the recipient through a server displaced
6 from the recipient, the steps of: providing at the recipient a string comprising an encrypted
7 embedded hash of a string including an identification of the sender, the message and a hash of
8 the attachment (See Tomkow Page 41 Lines 19-32), decrypting the string (See Tomkow Page 41
9 Lines 32-33), hashing the string less the hash of the string (See Tomkow Page 42 Line 1),
10 comparing the hash of the string less the hash of the string and the embedded hash (See Tomkow
11 Page 42 Lines 1-2), and using the results of the comparison to indicate to the recipient the
12 authenticity of the message and the attachment (See Tomkow Page 42 Lines 2-15), but Tomkow
13 failed to disclose that the encrypted string was compressed, or decompressing the encrypted
14 string.

15 Stark teaches that in order to make email data smaller, the data should be compressed to
16 make it smaller prior to transmission, and should be decompressed upon reception (See Stark
17 Abstract).

18 It would have been obvious to the ordinary person skilled in the art at the time of
19 invention to employ the teachings of Stark in the email system of Tomkow by compressing the
20 modified message, and later decompressing the modified message in order to allow for
21 comparison. This would have been obvious because the ordinary person skilled in the art at the
22 time of invention would have been motivated to provide a smaller message for transmission.

Art Unit: 2131

1 Regarding claim 46, Tomkow disclosed in a method of authenticating at a recipient a
2 message and an attachment transmitted from a sender to the recipient, providing an attachment
3 (See Tomkow Page 41 Lines 19-32), providing at the recipient on encryption of a hashed string
4 including information relating to the identification of the sender, the attachment and the message
5 stripped of the attachment (See Tomkow Page 41 Lines 19-32), decrypting the encrypted hash of
6 the hashed string (See Tomkow Page 41 Lines 32-33), separating the hash from the string (See
7 Tomkow Page 42 Line 1), forming a hash from the information relating to the identification of
8 the sender, the attachment and the message stripped of the attachment (See Tomkow Page 42
9 Lines 1-2), comparing the hash separated from the string and the hash formed from the
10 information in the string (See Tomkow Page 42 Lines 2-15), and using the results of the
11 comparison to indicate to the recipient the authenticity of the message and the attachment (See
12 Tomkow Page 42 Lines 2-15), but Tomkow failed to disclose that the encrypted string was
13 compressed, or decompressing the encrypted string.

14 Stark teaches that in order to make email data smaller, the data should be compressed to
15 make it smaller prior to transmission, and should be decompressed upon reception (See Stark
16 Abstract).

17 It would have been obvious to the ordinary person skilled in the art at the time of
18 invention to employ the teachings of Stark in the email system of Tomkow by compressing the
19 modified message, and later decompressing the modified message in order to allow for
20 comparison. This would have been obvious because the ordinary person skilled in the art at the
21 time of invention would have been motivated to provide a smaller message for transmission.

Art Unit: 2131

1 Regarding claims 44 and 47, Tomkow and Stark disclosed separating the attachment
2 from the message, hashing the separated attachment, comparing the hashed separated attachment
3 and the hashed attachment in the string, and using the results of the comparison provided in the
4 previous step to indicate the authenticity of the message and the attachment (See Tomkow Page
5 41 Line 19 – Page 42 Line 15).

6 Regarding claim 45, Tomkow and Stark disclosed recovering the message and the
7 attachment and transmitting the recovered message and attachment to the recipient with the
8 indication of their authenticity (See Tomkow Page 41 Lines 19-25).

9
10 Claims 33-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomkow
11 and Meyer, and further in view of Stark et al (Patent Application Publication 2002/0131566)
12 hereinafter referred to as Stark.

13 Regarding claim 33, Tomkow and Meyer disclosed an a method of transmitting a
14 message from a sender through a server displaced from the recipient, the steps at the server of:
15 receiving the message and an attachment that is not part of the message from the recipient at a
16 website providing at the server for an indication of the authenticity of the message (See Tomkow
17 Page 41 Lines 28-32 and the rejection of claim 1 above), providing at the server for an encrypted
18 version of the combination of the message and the attachment (See Tomkow Page 41 Lines 19-
19 32), decrypting the encrypted version of the combination of the message and the attachment in
20 accordance with the particular encryption to provide a digital fingerprint of the combination of
21 the message and the attachment (See Tomkow Page 41 Lines 32-33), and comparing second
22 digital fingerprint to determine the authenticity of the message and the attachment (See Tomkow

Art Unit: 2131

1 Page 42 Lines 1-5), but Tomkow and Meyer failed to disclose that the encrypted version was
2 also compressed, decompressing the compressed encrypted version of the combination of the
3 message and the attachment in accordance with the particular compression to provide a first
4 digital fingerprint of the combination of the message and the attachment for comparison.

5 Stark teaches that in order to make email data smaller, the data should be compressed to
6 make it smaller prior to transmission, and should be decompressed upon reception (See Stark
7 Abstract).

8 It would have been obvious to the ordinary person skilled in the art at the time of
9 invention to employ the teachings of Stark in the email system of Tomkow by compressing the
10 modified message, and later decompressing the modified message in order to allow for
11 comparison. This would have been obvious because the ordinary person skilled in the art at the
12 time of invention would have been motivated to provide a smaller message for transmission.

13 Regarding claim 34, the combination of Tomkow and Meyer and Stark disclosed
14 transmitting to the recipient the results of the comparison of the first and second digital
15 fingerprints (See Tomkow Page 41 Line 28 – Page 42 Line 15).

16 Regarding claim 35, see the rejection of claim 19 above.

17 Regarding claims 36 and 37, see the rejection of claim 29 above.

18 Claims 38-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomkow
19 and Meyer, and further in view of Kaufman et al. (US Patent Number 5,764,772) hereinafter
20 referred to as Kaufman.

21 Regarding claim 38, Tomkow and Meyer disclosed in a method of transmitting a message
22 and an attachment from a sender to a recipient through a server displaced from the recipient,

Art Unit: 2131

1 including the steps at the server of identifying the sender (See Tomkow Page 40 Lines 19-24),
2 hashing the attachments (See Tomkow Page 40 Lines 21-25), stripping the message of the
3 attachments, hashing the identification of the sender, the hashed attachments and the message to
4 form a hashed string (See Tomkow Page 40 Lines 22-26), encrypting the hashed string (See
5 Tomkow Page 40 Lines 26-28), and digitally sealing the encrypted hashed string by attaching the
6 encrypted hashed string to an HTML file and attaching the HTML file including the encrypted
7 hashed string to the message (See Tomkow Page 40 Lines 26-30 and the rejection of claim 1
8 above), but Tomkow and Meyer failed to disclose hashing the hashed string and encrypting the
9 result if the hashing of the hashed string.

10 Kaufman teaches that in order to protect against the use of a lookup table to compute
11 hashes, the hash should be performed multiple times (See Kaufman Col. 10 Line 64-Col. 11
12 Line 6).

13 It would have been obvious to the ordinary person skilled in the art at the time of
14 invention to employ the teachings of Kaufman by hashing the hashes of Tomkow. This would
15 have been obvious because the ordinary person skilled in the art would have been motivated to
16 prevent the generation of a hash table corresponding to the hashing system.

17 Regarding claim 39, Tomkow and Kaufman disclosed adding the message to the
18 encrypted hash of the hashed string, and transmitting the message and the encrypted hash of the
19 hashed string to the recipient (See Tomkow Page 40 Lines 26-31).

20 *Conclusion*

21 Claims 1-24,26-28,30-40 and 43-47 have been rejected.

Art Unit: 2131

1 The prior art made of record and not relied upon is considered pertinent to applicant's
2 disclosure.

3 Applicant's amendment necessitated the new ground(s) of rejection presented in this
4 Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

5 Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

6 A shortened statutory period for reply to this final action is set to expire **THREE**
7 **MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**
8 **MONTHS** of the mailing date of this final action and the advisory action is not mailed until after
9 the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period
10 will expire on the date the advisory action is mailed, and any extension fee pursuant to 37
11 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,
12 however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this
13 final action.

14 Any inquiry concerning this communication or earlier communications from the
15 examiner should be directed to Matthew T. Henning whose telephone number is (571) 272-3790.
16 The examiner can normally be reached on M-F 8-4.

17 If attempts to reach the examiner by telephone are unsuccessful, the examiner's
18 supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the
19 organization where this application or proceeding is assigned is 571-273-8300.
